                                                                    The method aims to provide a collection of highly reproducible microsatellite marker sequences (MMS) at approx. 10-50 cM intervals throughout the human genome which can be detectably labelled. The MMS are polymorphic, simple sequence repeats and can be used in automated genotyping. esp. fluorescence-based. The primers correspond to the unique DNA sequence surrounding each marker, and PCR is used to detect each polymorphism. When the MMS show considerable polymorphism (ie. a difference in the number of repeats) between individuals, the markers can be particularly informative. The MMS can be ideal for linkage studies. Kits comprise at least 4 groups, of at least 3 sets, each comprising labelled primers for PCR amplification of the DNA. Group 11 primer pairs are shown in AAQ95841-82. The published size range of the D6S344 allele is 139-159 bp, and the degree of heterozygosity in the population is

PCR This sequence represents a PCR primer used in the method of the invention. The method is for detecting the presence of alleles for glaucoma comprising haplotype analysis of human chromosome 2 and 6 respectively, where the haplotypes are associated with loci GLC1B and GLC6p25 respectively. The primers are used to amplify gene sequences to generate information necessary to compile haplotype profiles. The parameter of the profiles can be used to detect presymptomatic and symptomatic glaucoma. They can also be used to localise, isolate and identify the GLC1B and GLC6p25 loci so that detection of individuals with glaucoma is enhanced. The haplotype analyses also provide means for identification and following of mutant alleles in pedigrees or populations.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identification of presymptomatic individuals using the methods allows intervention in the disease process and obviates the impact of inheriting a mutant allele causing disease, by medically disrupting the initiation or progression of the disease
                                               hybridisation. Cytochrome P450 is a group of enzymes located in the endoplasmic reticulum primarily in the liver. Cytochrome P450 (CYP) is involved in the major route of phase I drug metabolism. The polymorphism of these enzymes results in the appearance of different phenotypes with differential capacities to metabolise drugs. The method allows for the detection of a mutation in a CYP nucleotide sequence, where the mutation is known to affect the isoform's ability to metabolise a drug. The method is useful for measuring a patient's ability to metabolise a drug, specifically drugs which are metabolised by cytochrome P450 such as omegrazole, pentaprazole, phenytoin, verapamil, propanolol, tolbutamide, swarfarin, tricyclic antidepressants such as imipramin and anti-malarial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Primer; cytochrome P450; drug metabolism; omeprazole; pentaprazole; phenytoin; verapamil; propanolol; tolbutamide; S-warfarin; imiprami anti-malarial prodrug; proguanil; tricyclic anti-depressant; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 18
                                                                                                                                                                                                                                                                                                                                                                                                 Determining the ability of cells to metabolize a drug using complementary to a target sequence immediately adjacent and relation to a defined point mutation of single-stranded DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAA09767 standard; DNA; 18
                                                                                                                                                                                                                                                 The invention relates to a method for determining the ability of a cell to metabolise a drug. The method comprises using a detection primer complementary to a sequence 5' in relation to a point mutation of single-stranded DNA encoding a cytochrome P450 isoform, and detecting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hauzenberger D;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28-AUG-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           25-AUG-1999;

                                                                                                                                                                                           PCR primers AAF24962-65 were used to amplify exon 12 of the human kritl gene. Kritl is a member of the Ras gene family. Mutations in the kritl gene responsible for certain vascular abnormalities. The primers are used to detect mutations in the Kritl gene, specifically those mutations that are associated with presence of cavernomas, for diagnosis. The kritl gene, or its derivatives, are useful in gene therapy for controlling or its derivatives, are useful in gene therapy for controlling or

The Zmax1 and HBM genes have osteopathic activities. The genes can be used in gene therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoparosis, Paget's disease, sclerostosis, osteomalacia and fibrous dysplasia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a diagnostic kit for detecting trisomy 21 in a human foetus, which comprises at least two pairs of oligonucleotide primers suitable for amplification, by polymerase chain reaction (PCR), of both strands of a target DNA sequence, i.e. a short tandem repeat region of human chromosome 21. The kit is used for prenatal, non-invasive diagnosis of trisomy 21. The present sequence is an oligonucleotide suitable for use in the kit of the invention
                                                                                                                                                diagnosing, treating or preventing e.g., a identifying a molecule that binds to high corresponding wild type gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       molecules encoding human Zmaxl and HBM, and PCR primers,
 The present invention describes a method for detecting and differentiating between haematopoletic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG which distributions the target nucleic acid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              represent specifically claimed nucleotide sequences from the present CC invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative CC disorder haematopoietic cells; for differentiating between acute CC disorder haematopoietic cells; for differentiating between acute CC determining the cytosine methylation state and/or single nucleotide CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder CC related sequences and their complements; and as primers for the amplification of haematopoietic cell proliferation disorder related DNA complements. The nucleotide sequences from the present invention can also be used for detecting a predisposition to, differentiation between Subclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

comprising an alteration an LRP5 that is modulated The invention relates

modulated gene,

mass

(MBM)

to novel transgenic animals expressing expressing the corresponding wild type expressing the corresponding the for LRP6, coon of the gene encoding LRP5 or LRP6, cated by an altered gene control sequence

or

y the high e HBM gene, or expressing ce introduced

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       by homologous or non-homologous recombination. The transgenic animals are for the study of bone density modulation or bone mass modulation. The cinvention has osteopathic and cytostatic activity. The polynucleotides of the invention may have a use in gene therapy. The transgenic animals and nucleic acids are for the study of bone density modulation, where the bone mass is modulated relative to non-transgenic animals of the same species in more than one parameter selected from bone density, bone transgenic animals, nucleic acids and methods are useful for identifying molecules involved in bone development, and for developing pharmaceutical compositions, which may be employed for treating or preventing bone diseases, e.g. osteoporosis, osteomalacia, rickets, Paget's disease, or neoplasms of the bone. The transgenic animals and nucleic acids are also useful in methods for disposing diseases involved in bone development, or characterised by reduced bone density or mass. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The present invention describes a method of modulating type I muscl formation comprising contacting a cell with an agent that modulates alpha expression or activity, so that type I muscle formation is modulated. Also described: (1) a method for identifying a compound capable of modulating type I muscle formation comprising contacting cell with a compound, and determining whether PGC-1 alpha expressions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunomodulator; antidepressant; gene therapy;
aberrant type I muscle formation disorder; heart failure; disuse atrophy;

CC treating a disorder associated with aberrant type I muscle formation
CC comprising assaying the ability of the compound to modulate the
CC expression or activity of PGC-1 alpha; (3) compounds identified by the
CC method of (1) or (2); (4) a method for treating a subject having a
CC disorder associated with aberrant type I muscle formation comprising
CC administering to the subject an agent capable of modulating PGC-1 alpha
CC expression or activity; (5) a method for increasing type I muscle
CC compation in a subject comprising administering to the subject an agent
CC expression or activity; (5) a method for increasing type I muscle
CC expression or activity; (5) a method for increasing type I muscle
CC expression or activity; (5) a method for increasing type I muscle
CC expressed in the skeletal muscle of the animal. Expression vectors and
CC expressed in the skeletal muscle of the animal. Expression vectors and
CC expressed in the skeletal muscle of the animal. Expression vectors and
CC expressed in the pGC-1 alpha polypeptides, are also described. PGC-1
CC alpha has cardiant, antidabetic, anorectic, immunomodulator and
CC antidepressant activities, and can be used in gene therapy. The agents
CC modulating type I muscle formation or treating a disorder associated with
CC aberrant type I muscle formation or treating adisorder such as
CC diabetes, obesity, cachexia or anorexia. The PGC-1 alpha nucleic acid
CC molecules, polypeptides, antibodies and modulators are useful in drug
CC screening assays or in gene therapy. The transgenic animals are useful in
CC to molecules, polypeptides, antibodies and modulators are useful in the
CC involved with type I muscle formation. The presents sequence represents a
CC diabetes, polypeptides, antibodies and modulators are useful in the
CC modulating assays of the promoter of the semigence which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  片

CC capable of modulating type I muscle formation comprising a compound capable of modulating type I muscle formation comprising a compound capable of cell with a compound, and determining whether RGC-1 alpha expression or comprising associated with aberrant type I muscle formation comprising assaying the ability of the compound identified by the comprising associated with aberrant type I muscle formation comprising associated with aberrant type I muscle formation comprising a subject having a compound of (1) or (2); (4) a method for treating a subject having a compound of (1) or (2); (4) a method for treating a subject naving a compound comprising a compound of (1) or (2); (4) a method for increasing type I muscle formation comprising a compound of compound of (1) or compound in a subject comprising administering to the subject an agent capable of increasing type I muscle formation or activity; (5) a method for increasing type I muscle comprising an exogenous pGC-1 alpha nucleic acid molecule, where the exogenous pGC-1 alpha nucleic acid molecule is cells comprising the pGC-1 alpha nucleic acid molecule is cells comprising the pGC-1 alpha nucleic acid molecule is cells comprising the pGC-1 alpha nucleic acids, and antibodies that specifically bind pGC-1 alpha polypeptides, are also described. pGC-1 alpha has cardiant, antidiabetic, anorectic, immunomodulator and compound that proper in muscle formation or treating a disorder associated with aberrant type I muscle formation or treating a disorder such as compound with type I muscle formation. The present sequence represents a mouse pgC-1 alpha promoter CRE nucleotide sequence, which is used in the excreening assays or in gene therapy. The transgenic animals are useful in drug screening assays or in gene therapy. The transgenic animals are useful in consult in the properties of the present invention.

CC intolecules, polypeptides, antibodies and modulators are useful in drug screening assays or in gene therapy. The transgenic animals are useful in the properties

The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence is a Sequence Tagged Site (STS) marker, which was used to prepare a physical map of the Zmax1 (LRP5) gene region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid comprising a mutation in LRP5 or diagnosing a HBM-like phenotype in a subject and composition for modulating bone mass and/or lipid

The invention also discloses a kit for determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder, where the kit comprises markers for two or more of the chromosomal regions cited. The method and kit are useful for determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder in a family affected by bipolar affective disorder, for determining the contribution of these chromosomal regions to bipolar affective disorder in an affective family member, and for assessing an increased or decreased arisk of developing bipolar illness for a tested individual from an affected family. ACA58053-ACA58292 represent primers used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder in a family comprises determining the genotype of e.g., chromosomal regions D4S402 and D4S424.
                              New isolated polynucleotides comprising single nucleotide polymorphisms of the cardiovascular gene, useful for assessing predisposition or susceptibility to a cardiovascular disease, e.g. atheroscierosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder. The method comprises determining the genotype with least one marker of at least one chromosomal region linked to a locus
               susceptibility to a cardiovascular disease, e.g. restenosis or stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 8; 79pp; English.

(I) is a polynucleotide comprising single nucleotide polymorphisms predicting cardiovascular disease. The polynucleotides are useful for assessing predisposition or susceptibility to a cardiovascular disease, e.g. atherosclerosis, ischemia/reperfusion, hypertension, restenosis, arterial inflammation, myocardial infarction, and stroke. These may also be used to predict personal medication schemes omitting adverse drug reactions, or as probes for detecting genetic polymorphisms and as templates for the recombinant production of normal or variant peptides/polypeptides encoded by the genes. This sequence corresponds to a PCR primer to amplify one of
                                                                                                                                                                                                                                                                                                                                                                                                                                   high
                                                                                                                                                                                                                                                                                                                                                                                                                                               acute coronary syndrome; antiatherosclerotic; cardiant; antianginal; leukotriene biosynthesis inhibitor; leukotriene receptor antagonist; 5-lipoxygenase activating protein; FLAP; human; chromosome 13; chromosome 13q12; polymorphism; 5-lipoxygenase gene promoter; 5-LO gene promoter; diabetes; hypertension; hypercholesterolaemia; obesity; inflammatory marker; low density lipoprotein; cholesterol; cholesterol;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    by the genes. This sequence the genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 72; 187pp; English.
                                                          Use of leukotriene synthesis for treatment for myocardial infarction in individual.
                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens

Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a subject at risk of melanoma, useful for treating melanoma, comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method of identifying a subject at risk of melanoma comprising detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample polymorphic variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 5; Page 84; 295pp; English.

Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject, and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP probe.
from a subject. Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated we melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP processing the contraction of the cont

                               of breast cancer comprising detecting the presence or absence of one or more polymorphic variations associated with breast cancer in a nucleic acid sample from a subject. The method of the invention has cytostatic applications and may be useful for identifying a subject at risk of breast cancer, for early diagnosis, prevention and treatment of breast cancer, possibly via gene therapy, as well as to analyse and predict a response to a breast cancer treatment and in clinical drug trials. The current sequence is that of an Extend primer (also described as probe) of the invention which was used to genotype human intercellular adhesion molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor; BB2; CD54; cell surface glycoprotein p3.58) has been mapped to chromosomal position 19p13.2, ICAM-6 (landsteiner-Wiener blood group; LW) has been mapped to chromosomal position 19p13.2-cen and ICAM-5 (telencephalin) has been mapped to chromosomal position 19p13.2-cen and ICAM-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 18 BP; 5 A; 2 C; 6 G; 4 T; 0 U; 1 Other;
                                                                                                                                                                                                                                                                                                                                                       of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or GALE regions which are associated with breast cancer in a nucleic acid sample
                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2004-441051/41.

                                                                                                                                                                                                      The present invention describes a method for detecting the presence polymorphisms associated with inflammatory bowel diseases such as ulcerative colitis and Crohn's disease. The methods can be used to othe presence of genetic polymorphisms associated with inflammatory k disease and correlating their occurrence with disease states. They used in this way for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis. The present sequence is a polymorphic site described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-OCT-2001

                                                                                                                                       CC anearbity and heredity, Particular applications are diagnosts of comparishing at comparishing comparishing at least two comparishes. (i) generating at least two comparishes (ii) generating at least two comparishes (iv) from the target nucleic acid; and (ii) analysing F by mass comparishes (iii) analysing F by mass comparishes (iv) from the sequences in AAV39483 to AAV39592 are specifically compared primers for use in the mass spectrometric analysis of the above process. The process is used to detect genetic diseases (e.g. comparishing that the process and many others) or chromosomal abnormalities (id) from the process and many others) or chromosomal abnormalities (id) from the process and cancers; also for establishing comparishility and heredity. Particular applications are diagnosis of the process and comparishility, and in genetic fingerprinting. Compared with known methods using MS, this process requires fewer specific reagents and is better suited to automation. Extended primers are shorter; primer compared simultaneously. The present sequence represent an oligonucleotide used in an example from the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 2308
                         AAA23422 represent their corresponding target sequences. The ribozymes (the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as meovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                   corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and AAA21596 to AAA21689 represent their corresponding target sequences; AAA21689 to AAA22475 and AAA23233 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA2362, AAA2343 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes enzymatic nucleic acid molecules with RN cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipocriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of an mRNA encoding an angiogenic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
CC cleaving activity, which specifically gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AnAl7167 and AAAl7561 to AAAl7622 represent ribozyme sequences for ARNT, CC and AAAl7167 and AAAl7560 and AAAl7623 to AAAl7684 represent their corresponding target sequences; AAAl7685 to AAAl8385 and AAAl9087 to AAAl9154 represent ribozyme sequences; AAAl7685 to AAAl9385 and AAAl9087 to AAAl9154 represent ribozyme sequences for Tie-2, and AAAl8386 to AAAl9086 cC aAAl9155 to AAAl9222 represent their corresponding target sequences; AAAl7685 to AAAl9385 and AAAl9086 cC aAAl9155 to AAAl9222 represent their corresponding target sequences; AAAl9232 to AAAl9386 represent their corresponding target sequences; CC aAAl9233 to AAA20361 and AAAl9315 to AAAl9322 represent their corresponding target sequences; CC aAA2l689 to AAA21475 and AAA23363 to AAA23342 represent their corresponding target sequences; CC aAA21689 to AAA22475 and AAA23363 to AAA23342 represent their corresponding target sequences; CC aAA21422 represent their corresponding target sequences; CC aAA23422 represent their corresponding target sequences; CC aAA23422 represent their corresponding target sequences. The ribozyme sequence corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA23422 represent their corresponding target sequences. The ribozyme of CC aAA2342 represent their corresponding target sequences. The ribozyme of CC aAA2342 represent their corresponding target sequences. The ribozyme of CC aAA2342 represent their corresponding target sequences. The ribozyme of CC aAA2342 represent their corresponding 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
CC hydrocarbon nuclear transporter (ARNT) gene, an integrin albha 6 subunit gene, or a Tie-2 gene. AAA16775 to CC AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their CC corresponding target sequences; AAA17623 to AAA18385 and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to AAA19154 represent tribozyme sequences for Tie-2, and AAA19087 to AAA19154 represent tribozyme sequences for Tie-2, and AAA19086 cand AAA191522 represent their corresponding target sequences; CC AAA19223 to AAA19222 represent their corresponding target sequences; CC AAA19223 to AAA21681 represent their corresponding target sequences; CC AAA21689 to AAA21688 represent their corresponding target sequences; CC CAA21596 to AAA21688 represent their corresponding target sequences; CC CAA21689 to AAA22475 and AAA2363 to AAA2342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23622, AAA23343 to CC CC corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or CC contegrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related cancular degeneration (ARMD), inflammation, and arthritis, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

       CC desired nucleic acid (NA) that contains multiple repeats of a contains multiple repeats of a contains and the desired NA in which cc providing a treated sample that may contain the desired NA in which cc providing a treated sample that may contain the desired NA in which cc several predetermined repeating NA target sequences are hybridised with a CC NA probe, analysing for presence of hybridised NA containing the NA cc probe, and thereby the presence of hybridised NA containing the NA cc is useful for determining the presence or absence of desired NA. The method cc acids that contain multiple repeats of a predetermined NA target cc sequence, in a NA sample obtained from a biological sample, where the cc repeated sequence includes several predetermined repeated sequence that cd iffer in length and/or sequence. The methods can be efficiently used for cd istinguishing human and bacterial NA. The method is highly sensitive, cc and enables detection and quantification of the presence of a NA without the need to undergo a NA target sequence enrichment step prior to a NA contains multiple repeats of a NA target sequence. This calculate detection of the need to that contains multiple repeats of a NA target sequence. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                     The invention relates to a kit for diagnosing and treating T-cell associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or CDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases including autoimmune diseases, degenerative nervous system diseases, graft versus host disease, hypersensitivity diseases, infectious disease, and neoplastic diseases. Autoimmune diseases include Addison's disease, and neoplastic diseases. Autoimmune diseases include Addison's disease.

Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the ICAM-1 target sequences and thereby inhibit ICAM-1 expression, making them useful for reducing transplant rejection and alleviating symptoms in patients with rheumatoid arthritis, asthma and other inflammatory disorders. (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                         hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the ICAM-1 target sequences and thereby inhibit ICAM-1 expression, making them useful for reducing transplant rejection and alleviating symptoms in patients with rheumatoid arthritis, asthma and other inflammatory disorders. (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29-MAR-1994;
                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves ICAM-1 mRNA at uncleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential base positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ribozymes having modified bases and methods for producing them - in inhibiting disease related genes.

CC This invention describes a novel nucleic acid containing a specific CC segment having at least one region that modulates expression of the VR1 CC (vanilloid receptor type 1) receptor, or a functional derivative, allele CC or fragment of this region, or a sequence that hybridises to it under CC standard conditions. The VR1 modulator is derived from one or more of CC positions 221931-223344 of GenBank AL670399, 31673-36359 of AL663116, or CC 44731-34231 or 36616-33151 of APIA68787 and is involved in transmission of CC describes a vector that contains the VR1 modulator, host cells containing CC this vector (other than human germ or embryonal stem cells) and a method for modulator or the vector into a cell that contains the VR1 gene. The CC products of the invention are used for detecting a transcription factor from its binding to a regulatory sequence (or a double-stranded CC oligonucleotide fragment of it), e.g. by Western blotting or enzyme-CC associated with overexpression or underexpression of the transcription factor. The region that modulates VR1 receptor expression includes a cC binding site for a transcription factor, e.g. MZPI, NFRappaB, NFAT or CC GATA1. The nucleic acids of the invention, or vectors containing them, CC eare used for prevention or treatment of pain, also for treating containing them, CC eare used for prevention or treatment of pain, also for treating them, CC eare used for sequence represents a fragment of murine VR1 exon 1d DNA which is capable of binding to a transcription factor.

The invention relates to an isolated nucleic acid (N1) comprising at CC least 20 but not more than 1500 consecutive nucleotides of the optineurin CC promoter appearing as ADE13890. Also included are the optineurin promoter coperably linked to a heterologous nucleic acid, a nucleic acid capable of detecting a single nucleotide polymorphism (SNP) in the optineurin promoter promoter, a host cell comprising the promoter operably linked to a cc heterologous sequence, diagnosing or prognosing glaucoma in a sample cobtained from a cell or bodily fluid (comprising detecting a polymorphism cc in a promoter region of the optineurin gene, associated with a glaucoma cc in a promoter region of the optineurin gene, associated with a glaucoma cc phenotype), detecting a SNP sequence variation in a sample containing DNA, detecting the presence of an optineurin promoter sequence variation cc susceptibility to glaucoma or to a progressive ocular hypertensive cc disorder resulting in loss of visual field in a patient (or the severity or progression of glaucoma in a patient, comprising providing containing the variation within the optineurin cc promoter and amplifying the DNA) and detecting a polymorphism (comprising obtaining a sample containing human genomic DNA, providing a nucleic acid capable of detecting a SNP located within an optineurin promoter, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid sequences of the optineurin gene are useful to detect polymorphisms particularly single nucleotide polymorphisms in the optineurin promoter to diagnose, prognose and treat glaucoma and relat

including autoimmune diseases, degenerative nervous system diseases, correct years to the seases, hypersensitivity diseases, infectious diseases, arrophic gastricis. Degenerative nervous system diseases include Addison's disease, arrophic gastritis. Degenerative nervous system diseases include multiple callergies, lype II hypersensitivities such as contact with allergens that lead to allergies, Type II hypersensitivities such as those present in codpasture's syndrome and Type IV hypersensitivities such as those present in caused by viruses such as HIV, fungal infections such as those caused by the yeast genus Candida, parasitic infections such as those caused by cobacterium. Neoplastic diseases include lymphoproliferative diseases such as leukaemias, lymphomas and cancers such as cancer of the brain, breast. The present sequence represents a Vbeta gene repeat sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human; T-cell associated disease; Vbeta; autoimmune disease; degenerative nervous system disease; graft versus host disease; hypersensitivity disease; infectious disease; neoplastic disease; hypersensitivity disease; atrophic gastritis; degenerative nervous system disease; multiple sclerosis; Alzheimer's disease; hypersensitivity disease; type I hypersensitivity disease; type I hypersensitivity; Goodpasture's syndrome; allergy; type II hypersensitivity; Goodpasture's syndrome; type II hypersensitivity; laprosy; infection; schistosome; filaria; bacterial infection; parasitic infection; schistosome; filaria; bacterial infection; Mycobacterium; neoplastic disease; lymphoproliferative disease; leukaemia; lymphoma; cancer; brain cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADH70756 standard; DNA; 16
                                                                                                                                                                                                                                                                                                                                         associated diseases which comprises a panel of nucleic acid primers specifically priming and allowing amplification of each Vbeta gene, VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant rejection and diagnosing and treating T-cell associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Kit for diagnozing and treating T-cell associated diseases e.g. autoimmune, degenerative nervous system and infectious disease, compructeic acid primers specifically priming and allowing amplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US2002150891-A1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                       CC markers. Mutations in the amplification primers for microsatellite CC markers. Mutations in the amplified sequences can be detected using the CC nucleic acid sequences of the invention (see AAT93326-T93354). The CC region of human chromosome 10 bounded by the markers D105541 and D105215. CC (I) is a tumour suppressor gene, particularly involved in prostatic CC cancer but also in melanoma, glioma and non-Hodgkin's lymphoma. Any CC nucleic acid that hybridises selectively to the specified chromosomal CC region can be used to determine susceptibility of a patient to cancer and CC for diagnosis/prognosis, sepecially of prostatic cancer, i.e. by CC treat cancer, especially when included in a viral vector. Similar CC treat cancer, sepecially when included in a viral vector. Similar CC treat cancer, sepecially when included in a viral vector. Similar CC molecules capable of hybridising to the protein, particularly antibodies. CC The labelled molecules when coupled to a cytotoxin can be used for cancer treatment. The encoded protein can be used to raise antibodies and these CC used to screen DNA expression libraries or for polypeptide isolation. (I) CC allows differential diagnosis between neoplasia and hyperplasia of the prostate (all tumours with a log loss have lost this region) and CC determination of micro-metastases in the blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Local Similarity

The present invention describes enzymatic nucleic acid molecules with RNA cleave RNA encoded by an aryl cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA17561 to AAA17562 represent ribozyme sequences for ARNT, and AAA17168 to AAA17563 to AAA17623 ro AAA17644 represent their corresponding target sequences; AAA17655 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA17655 to AAA18385 and AAA18386 to AAA19086 and AAA19155 to AAA20361 and AAA21501 to AAA21505 represent ribozyme sequences for integrin alpha 6 subunit, and AAA20362 to AAA21509 and AAA21505 to AAA21505 t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

ribozymes for modulating the synthesis, mRNA encoding an angiogenic factors. expression and/or stability

Claim 54; Page 243; 305pp; English

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNF) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, and AAA17168 to AAA17560 and AAA17623 to AAA1784 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 and AAA19155 to AAA19222 represent their corresponding target sequences; AAA19233 to AAA20361 and AAA21501 to AAA21595 represent ribozyme

The ribozymes the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, angiofibroma of tuberous solerosis, pot-wine stains, Sturge Weber syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu syndrome, and other syndromes and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; aryl hydrocarbon nuclear transport; ARNT; TIB-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis, pot-wine stain; Sturge Weber syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequences for integrin alpha 6 subunit, and AAA20362 to AAA21500 and AAA21596 to AAA21688 represent their corresponding target sequences; AAA21689 to AAA22475 and AAA23263 to AAA23342 represent ribozyme seq for integrin subunit beta 3, and AAA22476 to AAA23262, AAA23343 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-JUN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAA22973
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 17

밁 Ş

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT,

The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNY, cintegrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are compared to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as meavascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, considered to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, integrin subunit alpha-6, or tie-2, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for RNT, and AAA17168 to AAA17630 and AAA17635 to AAA18385 and AAA1987 to AAA1841768 to AAA1858 to AAA18585 and AAA19887 to AAA19154 represent ribozyme sequences for Tie-2, and AAA19155 to AAA19227 represent their corresponding target sequences; AAA19234 represent abanases for Tie-2, and AAA19155 to AAA19237 represent their corresponding target sequences; AAA19231 to AAA20381 and AAA1501 to AAA21595 represent ribozyme sequences for Tie-grin alpha 6 subunit, and AAA20362 to AAA21500 and AAA21596 to AAA21680 represent their corresponding target sequences; AAA21596 to AAA21680 represent their corresponding target sequences; AAA21596 to AAA22169 and AAA33263 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA22476 to AAA23343 to AAA23343 to AAA23476 to A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAA23422 represent their corresponding target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT; integrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related macular degeneration (ARMD), inflammation, and arthritis, as well as neovascular glaucoma, myopic degeneration, psoriasis, verruca vulgaris, angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber angiofibroma of tuberous sclerosis, pot-wine stains, Sturge Weber
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 17 BP; 5 A; 1 C; 4 G; 0 T; 7 U; 0 Other;
                                          Enzymatic and antisense nucleic acid inhibition of repressor genes, useful for producing e.g. granulocyte colony stimulating factor pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ribozyme; erythropoietin; granulocyte colony stimulating factor; interferon alpha; ss.

Inhibition of the repressors removes prevents inhibition (and consequently increases expression of) genes involved in the production erythropoietin, granulocyte colony stimulating factor protein and
                                                                                                                        The present invention relates to enzymatic and antisense nucleic acid molecules that act as inhibitors of the expression of repressor genes encoding the TR2 Orphan receptor, EAR3/COUP-TF-1, the GATA transcription factor gene, IRF-2 and/or the CAATT Displacement Protein (CDP). Thibition of the repressors removes prevents inhibition (and consequently increases expression of) genes involved in the production of erythropoietin, granulocyte colony stimulating factor protein and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           :7.
                                                                                                                                                                                                                                                                                   Enzymatic and antisense nucleic acid inhibition of repressor genes, useful for producing e.g. granulocyte colony stimulating factor protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 17 BP; 2 A; 2 C; 0 G; 0 T; 13 U; 0 Other;

The invention relates to a novel isolated 17 mer nucleic acid sequence, cc given in the specification, a sequence containing at least 15 consecutive cnucleotides from the 17 mer sequence with, after optimal cc alignment, at least 80 % identity to the 17 mer sequence that cc hybridizes to them under highly stringent conditions, or the complement cc acids of the invention are useful as probes and primers for detecting, cc identifying, quantifying and/or amplifying a nucleic acid, e.g. as one cc component of a gene chip, in vitro as (anti)sense reagents, and for cr production of recombinant polypeptides. Any of the nucleic acids, cc polypeptides, vectors containing the nucleic acids, cells containing the vector or antibodies directed against the polypeptides are useful for c preparation of pharmaceuticals for prevention and/or treatment of viral cd degeneration, specifically cancer but also Alzheimer's disease and containing the acid samples is useful for diagnosis and/or prognosis of these cd diseases. The polypeptides can also be used to generate antibodies, and containing the polypeptides and antibodies are useful as components of these caid sequences of the invention can be used in gene chips. The nucleic acid sequences of the invention can be used in gene cherapy. This polynucleotide sequence represents a tumour suppression crelated human fukutin oligonucleotide of the invention.

                                                                                S
                                                                                                                                                                                                                 The present invention relates to novel human zinc finger-containing CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is CC encoded at chromosome 7922.1, MDZ4 is encoded at chromosome 6921.3-22.2, MDZ7 is encoded at chromosome 16911.2 and MDZ12 is encoded at chromosome CC 15926.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, CC or in manufacturing a medicament for treating or preventing a disorder CC associated with decreased or increased expression or activity of MDZ3, CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic CC acids and proteins are also useful for diagnosing or monitoring a disease CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic CC acids can also be used as probes to detect and characterize gross CC alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are CC useful in constructing microarrays for measuring gene expression. The CC proteins are useful as therapeutic agents for gene therapy or as CC vaccines. The present sequence was used to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7g22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome fpp1.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12. The probes are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; immunostimulant; gene therapy; vaccine; human; zinc finger protein; MDZ3; MDZ4; MDZ7; MDZ12; chromosome 7q22.1; chromosome 6p21.3-22.2; chromosome 16p11.2; chromosome 15q26.1; cancer; developmental disorder; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30-JUL-2002; 2002EP-00016874.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EP1281758-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens
                      Homo sapiens
                                                                     Cytostatic; immunostimulant; gene therapy; vaccine; human; zinc finger protein; MDZ3; MDZ4; MDZ7; MDZ12; chromosome 7q22.1; chromosome 6p21.3-22.2; chromosome 16p11.2; chromosome 15q26.1; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    02-AUG-2001; 2001US-00922181

proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 1fp11.3 and MDZ12 is encoded at chromosome 1fp11.2 and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosting or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ4, MDZ7 or MDZ12, e.g. cancer.
                                                                                                         useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-JUL-2002; 2002EP-00016874

MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are useful in construction microarrance for measurements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ADB04279 standard; DNA; 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel human zinc finger-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (AEOM-) AEOMICA INC

proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7g22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 1fp11.2 and MDZ12 is encoded at chromosome 1fp11.2 and MDZ12 is encoded at chromosome 15g26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for dispnasing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 energic locus. The probes are
                                                 useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       associated with decreased or increased expression or activity of MDZ3, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 8;

New zinc finger-containing proteins and nucleic acids, useful manufacturing a medicament for treating or preventing a disord associated with decreased or increased expression or activity MDZ4, MDZ7 or MDZ12, e.g. cancer. a disorder
activity of MDZ3,

8; SEQ IJ NO 5272; 103pp; English.

The present invention relates to novel human zinc finger-containing proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2,

The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
The present invention relates to novel human zinc finger-containing proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7g22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 1ep26. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic; immunostimulant; gene therapy; vaccine; human; zinc finger protein; MDZ3; MDZ4; MDZ7; MDZ12; chromosome 7q22.1; chromosome 6p21.3-22.2; chromosome 16p11.2; chromosome 15q26.1; cancer;

                                                                               The present invention relates to murine oligonucleotides (ACC62754-ACC68806), which are associated with tumour suppression, tumour reversion, apoptosis and virus resistance. The oligonucleotides are useful as (1) as probes and primers for detecting, identifying, quantifying and/or amplifying nucleic acid, e.g. as one component of a gene chip; in vitro as (anti)sense reagents; and (2) for production of recombinant polypeptides. The oligonucleotides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   useful in constructing microarrays for measuring gene expre

                                                                                                                                                                                                                                                                                                                                                              The present invention relates to murine oligonucleotides (ACC62754-ACC68806), which are associated with tumour suppression, tumour reversion, apoptosis and virus resistance. The oligonucleotides are useful as (1) as probes and primers for detecting, identifying, quantifying and/or amplifying nucleic acid, e.g. as one component of a gene chip; in vitro as (anti)sense reagents; and (2) for production of recombinant polypeptides. The oligonucleotides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytostatic; virucide; neuroprotective; nootropic; neuroleptic; murine; tumour suppression; tumour reversion; apoptosis; virus resistance; viral disease; tumour; cell degeneration; cancer; Alzheimer's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ACC67292 standard; DNA; 17 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murine oligonucleotide associated with
